Inflammatory Bowel Disease (IBD), Diabetes, Pancreatitis and Bio-Algae Concentrates

Testimonial for Merlin by Cheryl Cohen-Vader

*My oldest cat, Merlin, is somewhere between 15 and 19 years old. While he continues to be vital and his blood work always very good, he suffers from **diabetes** and **inflammatory bowel disease (IBD)**. However, in March 2006, after suffering monthly attacks since December 2005, Merlin was diagnosed with chronic **pancreatitis**. Needless to say, I was very distressed about this additional scary disease and the pain it caused him. The usual treatment for chronic pancreatitis in cats was also problematic as it was another steroid, Prednisolone, and could not be taken simultaneously with the Budesonide used to treat his IBD.*

Within days of his diagnosis, I saw BioNutrition's bio-algae concentrate product in my local pet store, The Whole Cat and Dogs, too! The ladies who owned the store told me about the success experienced by both people and pets in moderating or eliminating various maladies. It sounded interesting so, I signed up for a seminar on bio-algae concentrates, scheduled for about a week later. The information imparted at the seminar seemed interesting and logical. So, while I do not believe in miracle cures, I was desperate to find something that would help Merlin and thought bio-algae concentrates were worth a try.

I began mixing bio-algae concentrates in my cats' wet food (Merlin, 10 year old Azul and 4 year old Snow). It is now July (2006) and Merlin has not suffered a pancreatitis attack since March. Not only that, he is more energetic than he has been in the four years since he became diabetic. He is jumping on the bathroom counter to drink water from the sink (his favorite) and running and playing a bit. Azul and Snow also experienced increased energy levels.

So, while this is not exactly a rigorous scientific test and bio-algae concentrates are not a cure all, I am a believer in the positive benefits of bio-algae concentrates. And, you can bet it is now a permanent part of my cats' lives!

How did bio-algae concentrates do all this? It did not. Bio-algae concentrates simply supplied the body with the super nutrients of Vitamin A, B-complex, C, D, E and K, Omega 3, 6, 9, GLAs (Gamma-Linolenic Acids), ALAs (Alpha-Linolenic Acids), DGLA (Dihomogamma-Linolenic Acid), DHA (Docosahexaenoic acid) and more fatty acids, antioxidants, over 4,000 enzymes, 10 essential amino acids plus 10 non-essential ones, over 5,000 total nutrients, so the **body could resume normal function**. Bio-algae concentrates **do not treat symptoms but holistically balance the whole body**. When the **endocrine and immune systems are holistically balanced**, everything will work like it should. Bio-algae concentrates are such a revolutionary concept they are 100 years ahead of their time. Now that is true holistic wellness!

These results are individual case studies. We cannot guarantee your results will be the same. Since each body responds differently to the super nutrition in bio-algae concentrates your results will be different. These statements have not been evaluated by the FDA. This information is not intended to diagnose, treat, prevent or cure any disease.
